

Email Appointments for Keetrax

How many emails did you have to send for your last appointment?

At least 3: a **request**, a **confirmation** and a **reminder**.

What if you only needed **one email**?

- It works because the email client **requests** the images through their static URLs in the **template**.
- The app gets the request and **creates** the image every time you open the email.
- It means the **[time slots]** will **always** be the latest available ones! No need to send another email if your schedule changes!
